

What if

you found cancer early
enough to make a difference

The earlier that cancer can be found, the higher the chance of better outcomes.

of cancer deaths are caused by cancers not commonly screened for.

It is time to look at cancer more broadly. Only 5 cancers have recommended screening. Adding a multi-cancer early detection test can improve the chance of finding cancer early

Introducing the Galleri® test

In partnership with GRAIL, Qualcomm is pleased to offer eligible employees and their spouse/domestic partner enrolled in the Premier QDHP or Premier PPO the **Galleri multi-cancer early detection test** covered 100% by Qualcomm's medical plan. The Galleri test detects a shared cancer signal across more than 50 types of cancer, offering the benefits of:

Early cancer detection

Detects a cancer signal shared by many cancers that are not commonly screened for today, to allow for earlier treatment.

Testing with ease

Completed with a simple blood draw.

Actionable results

If a cancer signal is found, the results can predict where in the body the cancer is located to help your healthcare provider guide your next steps.

How the Galleri test works

Through a simple blood draw, the Galleri test looks at DNA in your blood to determine if any of it may have come from cancer cells.

Who is eligible?

The Galleri test is being offered in 2023 to eligible Qualcomm employees and their spouse/domestic partner who are enrolled in the Premier QDHP or Premier PPO; age 35-49 with risk factors; or aged 50 years or older.

Galleri testing will be available on a phased roll-out. Visit www.QualcommPremierPlans.com for updates on when testing will be available and how to request it.

The Galleri test is intended to be **used in addition to, and not replace, other cancer screening tests** your healthcare provider recommends. The test does not measure your genetic risk of developing cancer in the future.

Important Safety Information

The Galleri test is recommended for use in adults with an elevated risk for cancer, such as those aged 50 or older. The Galleri test does not detect all cancers and should be used in addition to routine cancer screening tests recommended by a healthcare provider. Galleri is intended to detect cancer signals and predict where in the body the cancer signal is located. Use of Galleri is not recommended in individuals who are pregnant, 21 years old or younger, or undergoing active cancer treatment. Results should be interpreted by a healthcare provider in the context of medical history, clinical signs and symptoms. A test result of "No Cancer Signal Detected" does not rule out cancer. A test result of "Cancer Signal Detected" requires confirmatory diagnostic evaluation by medically established procedures (e.g. imaging) to confirm cancer. If cancer is not confirmed with further testing, it could mean that cancer is not present or testing was insufficient to detect cancer, including due to the cancer being located in a different part of the body. False-positive (a cancer signal detected when cancer is not present) and false-negative (a cancer signal not detected when cancer is present) test results do occur. Rx only.

The Galleri test has not been cleared or approved by the FDA.

Understanding the results

The Galleri test looks for a signal present in the blood that may be associated with cancer at the time of your blood draw.

There are two possible results from the Galleri test:

⊖ No Cancer Signal Detected

This means that no cancer signal was found; however, not all cancers can be detected by the Galleri test. Be sure to continue with routine recommended cancer screening tests. Missing routine cancer screenings or ignoring symptoms could lead to a delayed diagnosis of cancer.

⊕ Cancer Signal Detected

This means that there are signals associated with cancer that were detected. Your healthcare provider will discuss appropriate follow-up tests to confirm if cancer is present. The Galleri test does not diagnose cancer.

False negative and false positive results do occur.

Visit Galleri.com for more information about the Galleri test.
